

Time to pass the baton!

...to a new TD system

**EXTENDED UNTIL
JUNE 30, 2021**

Dear TDU user,

even the strongest runner must pass the baton to a new strong teammate to ensure continued team success.

Since its introduction in 2001, the GERSTEL TDU has been a strong runner in laboratories world-wide for almost two decades. Today many are operated with older versions of the GERSTEL MultiPurpose Sampler (MPS) and controllers that are near their end of life in terms of our ability to support them with spare parts.

For a smooth transition to new fully supported technology, GERSTEL offers a dual-track trade-in program until June 30, 2021.

Trade in your TDU and upgrade to the proven TDU 2 and C506 controller with a significant discount

Trade in your elderly MPS 2 and TDU for an upgrade to MPS robotic and TDU 2 / C506 controller with a significant discount

Whichever analysis your TDU is running, get a fresh start and guaranteed support with a technology upgrade.

Call your GERSTEL representative today to learn more.

*Good News for
Thermal Desorbers,
Emission Seekers,
and TD tubers*
